PROJECTS

Nebula – AI Conversational Chatbot Platform
Live: https://nebula-ruby-zeta.vercel.app/
Repo: https://github.com/maharshiv7/Nebula

- Built an enterprise-grade full-stack conversational AI platform using a MERN backend paired with a Python FastAPI microservice powered by the Groq LPU inference engine.
- Implemented real-time SSE token streaming with chain-of-thought reasoning, multi-tier LLM routing, and RAG-based long-term memory.
- Added live web search grounding, document/vision analysis, and a modern WebGL glassmorphic UI.

OrbitX – Space Exploration & Tracking Platform
Live: https://orbitx7-1.onrender.com/
Repo: https://github.com/maharshiv7/ORBITX7

- Developed a sci-fi-inspired platform to track real-time astronomical phenomena, confirmed exoplanets, near-Earth asteroids, solar storms, and the ISS.
- Built with a Flask + MySQL backend integrated with live NASA APIs, featuring a glassmorphism dashboard, space weather telemetry, celestial atlases, user bookmarking, and anomaly dossiers.

The Cashier UI – POS & Inventory Management System
Repo: https://github.com/maharshiv7/The-Cashier

- Built a full-stack Kirana/retail Point-of-Sale system for fast checkout, stock tracking, and sales analytics.
- Designed a lightweight web frontend paired with a Python Flask REST API backend connected to a MySQL database.
